Question: 3

A large retail company has integrated AEM into its commerce stack. Logged in users can submit product ratings through the ratings" component. To ensure initial ratings do not skew results too far positive or negative, the company plans to show the tallied ratings only after a minimum number of submissions has occurred.

For which reason must the ratings component be extended to meet these requirements?

- A. Only the average rating is available via API

- B. The Tally/Rating Component API does not provide the number of user responses.
- C. The author must be able to provide the minimum number of votes for display.
- D. A custom rating service must be created to support this functionality.

Answer: B
