ISTQB Certified Tester Advanced Level - Test Analyst

Questions & Answers

Demo

Version: 4.0

Question: 1

Which of the following software development lifecycle models requires the earliest involvement from the Test Analyst?

- A. V-model
- B. Embedded iterative model
- C. Agile development model
- D. Maintenance lifecycle

Answer: A

Question: 2

Which of the following appropriate tasks for the Test Analyst is performed during the test analysis phase?

- A. Review test estimates
- B. Examine the test basis
- C. Create a test execution schedule
- D. Evaluate status against exit criteria

Answer: D

Question: 3

What is the MOST important reason why test conditions should be understandable by business stakeholders?

- A. They should be able to review the test conditions and provide feedback to the Test Analyst
- B. They should be able to use them as a basis for designing test cases.
- C. They should be able to use them to establish traceability to requirements
- D. Test documentation should always be understandable by all stakeholders.

Answer: A

Question: 4

As a Test Analyst you are involved in the early stages of an acceptance test for a Product Data Management system. You are asked to write test designs and test cases based on use cases. An early version of the system is already available. It is expected that many things will change (including the user interface) during implementation of the new version.

The tests will be conducted by end-users with much domain knowledge who have also been involved in the project defining the user requirements (in the format of use cases) and reviewing other documentation.

What is the BEST option regarding the level of detail and documentation required for test cases in the project?

- A. Detailed low-level test cases since many re-runs of the tests are expected.
- B. High-level test cases supported by low-level test cases to allow for traceability and enable future changes.
- C. Low-level test cases only since the end-users have extensive domain knowledge.
- D. High-level test cases only since the end-users have extensive domain knowledge and many changes are expected

Answer: D

Question: 5

company in the medical domain has adopted methodical testing as its preferred test strategy. Before being able to release to the market an external audit on the test process is mandatory. The test team consists of a mix of highly experienced domain-based testers and junior testers who only recently joined the company.

What is the BEST option regarding the level of detail and documentation required for test cases in the project?

- A. Low-level test cases since this will support both the external audit and the new junior testers.
- B. High-level test cases since this is consistent with the chosen test strategy
- C. Low-level test cases since it will make the process more effective and it will make the best use of the knowledge and skills of the experienced domain testers.
- D. High-level test cases since it will make the process more effective and it will make the best use of the knowledge and skills of the experienced domain testers.

Answer: D
